Ligno's hourglass grain pattern segments the surface in a way that increases sanding pressure on each abrasive grain, while directing dust in the channels created in between. Its resistance to clogging prevents swirl marks in the working surface. In addition, each segments is constantly creating additional cutting edges during sanding.

The abrasive quality is important as every sanding step should make the following step easier. With a consistent scratch pattern, the sanded spot is far easier to polish out, making it impossible to see where the imperfection once was. Remove surface defects such as dust nibs in seconds with Mirka's system, saving both time and money.

Microstar abrasives are effective in both wet and dry sanding. For best results when sanding clearcoat and topcoat finishes, it is best to use an interface pad to prevent cutting through on the edges.

For longer life, wipe the Microstar disc with a microfiber cloth after making a few sanding passes.

Pair Mirka's Mini Belts with the PBS-13457 or PBS-10330 Pneumatic Belt Sanders. The rubber coated roller at the end of the tool not only aids with contour finishing but also enhances the life of the mini belts.

The control of sanding speed is also a big factor when using Mirka's mini belts. Running the tool at a lower speed actually gets the job done faster and also increases the life of the belt.

Polishing Pads

How do I choose the right nap on twisted wool pads?

As a general rule, the shorter the nap the more aggressive the pad will cut.

When do I choose foam over wool when polishing?

Twisted wool is used for aggressive polishing, while foam pads are not as aggressive.

Please refer to the chart above.

What speed should I run the polisher?

Running the polisher at 1500 RPM will prevent "burning" the finish.

DID YOU KNOW?

The MR-38CV-1, also known as a power block, is a great tool for block sanding. It straightens and flattens like a traditional hand block but leaves behind a scratch pattern like a 5" or 6" dual action sander, which doesn't require a great amount of effort to refine straight line scratches. This sander does it all with effortless guidance.

Two-Handed Pneumatic Tools

The second handle adds stability and control while reducing operator fatigue - it can be removed when not needed. The large orbit allows you to cover a wide area in less time with aggressive sanding and polishing.

Constructed of precision-molded, moisture-resistant composites for strength and durability. A storage hanger and backing pad are included.

DID YOU KNOW?

With Bluetooth and the myMirka® dashboard, you can easily monitor battery health status and available capacity. The Mirka® intelligent Li-ion battery allows a precise capacity measurement based on a coulomb counter.

It is possible to monitor individual cell voltage and, together with the coulomb counter, prolong the usage time. The firmware in the battery is upgradeable via the Bluetooth connection to the sander/polisher.

The 10.8V 2.5Ah battery has 3 cells and charging time is approximately 45 minutes. The 10.8V 5Ah battery has 6 cells and charging time is approximately 90 minutes.

Cordless Tools

Mirka cordless tools are light, ergonomic, and optimized for efficiency and portability, allowing freedom of movement without hoses or cables. Incredibly nimble, they are quiet, small, and low maintenance thanks to the brushless motor.

To minimize downtime, cordless tools come with two batteries and a charger so one can be recharging while the other is in use. Sanders and polishers come with two 2.5 Ah 10.8V Li-ion batteries. The ANGOS grinder comes with two 5.0 Ah batteries (we recommend using only 5.0 Ah batteries with the grinder).

For a comprehensive cordless system, combine Mirka cordless sanders, polishers, and grinders with our spot repair abrasives, polishing compounds, and grinding discs..

|| DID YOU KNOW?

Mirka power sanders can take a beating, thanks in large part to backup pads. Over time, backup pads wear out and lose their shape, preventing full contact with the surface being sanded and causing an inconsistent finish. Replacing the pad is a simple matter, restoring the sander's effectiveness.

You can extend the life of your backup pad by using a pad protector when not in use, as well as an interface pad between the backup pad and the abrasive. Depending on the thickness, an interface pad can also make the backing pad softer for contour or edge sanding.
