

The Most Powerful Photo-luminescence Available.

GloPoxy is a glow-in-the-dark epoxy made with high-grade photo-luminescent ingredients that make sure your epoxy glows as bright as it can for as long as it can. The formula absorbs light as energy and releases this energy when placed in the dark, so it can glow for hours and contains no impurities that interfere with its glow. Using any light source, this charge cycle can be performed endlessly. Durable, UV stable, and resistant to chemicals, water, and abrasion, you can use **GloPoxy** on virtually any surface whether you're indoors or outdoors.

GloPoxy resin system results in the brightest glow with extended glow in the dark duration.

KEY FEATURES

- GloPoxy results in the brightest glow with extended glow in the dark duration
- Light absorption and release processes of GloPoxy can be repeated endlessly
- Any light source will charge GloPoxy
- Low Odor, No VOC's, Non Toxic
- 100% solids content for increased build
- UV stable, durable, chemical, water and abrasion resistant for indoor & outdoor
- Produces an exceptionally tenacious etching bond for high adhesion
- Excellent hardness and wear resistance
- Self-leveling finish
